# ORDERING INFORMATION:

## What should I order?

Please consult the Public Health Microbiology & Reference Laboratory "Guide to Programs and Services" on our site at [www.phsa.ca/bccdcpublichealthlab](http://www.phsa.ca/bccdcpublichealthlab) for instructions on what container to use and how to collect and submit the sample.

## How do I order?

Please fax request using the "Sample Container Order Form"

- Fax to **(604) 707-2606**
- Order in single units, NOT in cases, boxes, packs or pads.

## How many should I order?

When ordering please keep in mind the following:

- A lot of sample containers have components that have a short shelf-life and therefore have expiry dates. Please order according to your needs instead of "stock-piling".

## How will I receive my order?

Orders will be processed and mailed using **Canada Post/BC Mail** and should arrive in 1-2 weeks

- If you prefer a courier service, please indicate your courier account number as well as the courier phone number in the additional requests area on the bottom of the order form. This service will not be provided unless both of the above are provided.
