

Copyright for Electronic Presentations

Whenever you incorporate a work (be it a cartoon, image, video clip, etc.) into a CD-ROM or DVD or PowerPoint presentation, you are making a reproduction. Without prior permission, that reproduction may constitute an infringement on the rights reserved for the owner of the rights.

Permission may also be needed to “execute or perform in public” the reproduced work, i.e., present the work in the public arena such as a classroom, a presentation, on the Internet, etc.

In certain situations, the use of a work without prior authorization from the copyright holder does not constitute a copyright infringement when it is considered “fair dealing”. Fair dealing allows reproductions to be made for the purposes of private study or research or for criticism or review.

Copyright and Images

You must obtain the permission of the copyright holder of an image before using, reproducing, or manipulating it in any type of resource.

When dealing with freely viewable collections on the internet, look for a page with copyright information, a license statement, terms and conditions, or permissions.

Creative Commons licenses: A growing number of online images are being published with [Creative Commons](#) licenses (for example, many of the images on [Flickr](#) and [Wikimedia Commons](#)). These licenses are designed to give copyright holders a [range of permission options](#) for digital intellectual property and in most cases allow educational uses.

Public domain: You will sometimes see images described as being “in the public domain.” This refers to works that belong to the community at large, are not protected by copyright, and may be appropriated by anyone.

Citing Images

Though you may obtain permission to use an image, you must still credit the copyright holder. In statements of usage rights on websites, this practice is often called “attribution.”

Conform as closely as possible to the structure and examples below with the information you have available:

- Image creator’s name (artist, photographer, etc.)
- Title of the image
- Date the image (or work represented by the image) was created
- Institution (gallery, museum) where the image is located / owned (if applicable)
- Date of access (the date you accessed the online image)
- Website and/or Database name

Copyright while working for a PHSA agency

If the work is created while you are employed by a PHSA agency the copyright generally belongs to the agency unless a written agreement states otherwise.

Although the agency owns the copyright to the employees work it cannot modify the work or allow it to be used in association with any product, service, cause or institution in a way that would hinder the reputation of its creator.

Copyright owners should mark their works with their name (or department or group name), the year in which the work was first published and the copyright symbol.

Copyright and the Internet

Much of the material on the Internet is protected by copyright. This includes postings to news groups, email messages, images, photographs, music, video clips and computer software. The

general rule is that you must get permission from the owner (usually the person or organization that created the material) to use text, graphics, images, sound and video that have been created by others.

Sometimes the material on a website is not subject to copyright restrictions and no special permission is required to use it or reproduce it. You will need to check the site for its policy on copyright or email the webmaster to see if this is the case. However, all reproduced material, copyright protected or not, should contain proper acknowledgement of the source.

More copyright information from the [Canadian Intellectual Property Office](#).
